AUDIO-INTENSITY.

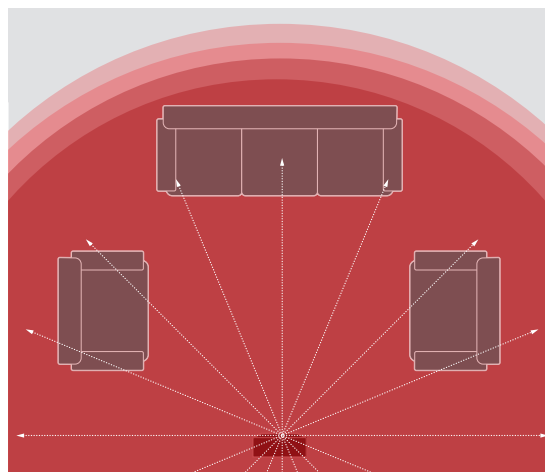

Simplicity meets intensity.

Intensify your audio experience with sound bar technology that's simply unlike any other. Introducing the SBX1250 Sound Bar, featuring advanced sound bar technology in a small, sleek package that includes four speakers and two built-in subwoofers. Easily connect to your HDTV, Blu-ray™ player or other media devices. Then, sit back and enjoy rich, realistic three-dimensional surround sound without complex calibrations, wayward wires or strategic speaker placement. It's all due to innovative Toshiba design and the advanced wave field synthesis technology of the 2013 CES Innovation Award winning Sonic Emotion® Absolute 3D. It drapes your room in immersive 3D sound, while eliminating the dead spots found in most sound bars. The SBX1250 is easy to set up, simple to mount and beautiful to experience.

Toshiba's SBX1250 Sound Bar fills the entire room with 3D sound.

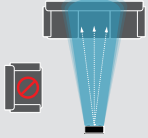

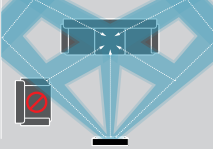

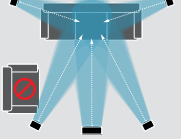

Compact Simplicity and Convenience

5.1 and other 'immersive' audio systems are nice to listen to, yet can be hard to set up, position and calibrate. They often take up lots of space and add cable clutter. But the SBX1250 Sound Bar is simple to set up. Plus, thanks to a built-in subwoofer, it delivers incredible bass without an array of external speakers.

Broad Device Compatibility

You might buy this Sound Bar for your HDTV. But don't forget your other digital gear. An array of digital and analog inputs allows you to enjoy full, rich, extra-realistic sound from a computer, tablet, MP3 or Blu-ray Disc™ player and, of course, your television.

Other solutions claiming to produce 3D sound.

	Traditional Single Speaker Surround Sound <i>Only the person directly in the center can hear the surround sound effects</i>
	Surround Sound Projection <i>This technology relies on complex adjustments of the speakers to create 3D sound</i>
	5.1 Sound Systems <i>Requires multiple speakers and a complicated set-up in order to experience optimal audio effects</i>
